

## BMP Inspection Overall Rating

### Overall BMP Rating Categories

Rating	Description
<b>A</b>	The BMP is functioning as designed with no problem conditions identified. No signs of impending deterioration.
<b>B</b>	Minor problems are observed, however, BMP is functioning as designed with no critical parameters with problem conditions. Candidate for annual inspection, however, depending on problem conditions may require additional inspections.
<b>C</b>	Moderate problems are observed, however, BMP is functioning as designed with no critical parameters with problem conditions. BMP performance is being compromised. Candidate for bi-annual inspection depending on problem conditions. Structural defects may require repair and/or restoration. Maintenance of the BMP should be scheduled.
<b>D</b>	Major problems are observed, and basin is not functioning as designed with several critical parameters with problem conditions. Conditions associated with the basin have compromised the BMP performance. BMP shows signs of impending deterioration with potential for failure. Maintenance should be performed immediately.
<b>E</b>	Severe problems are observed, and basin is not functioning as designed with several critical parameters with problem conditions. Conditions associated with the basin have compromised the BMP performance. BMP shows signs of impending deterioration and/or failure. Maintenance should be performed immediately.
