Appendix D

D.1 Design Aids

D.1.1 Introduction

Appendix D consists of standards for design drafting and instructions for various programs used in the design process. **Bold** type denotes user key-ins and *italics* denote menu item selections.

D.2 Clip Bound Procedure

D.2.1 Steps for using Clip Bound

- Call up appropriate plan sheet file that you plan to work in.
- Attach all necessary reference files, giving them logical names as you attach each to allow for easier manipulation at later dates. Please see [Falcon Instructions](#) for proper method of referencing design files.
- Set active level to 51.
- **LV=51**
(The purpose of working in level 51 is to ensure that if the reference file is detached, deleted, or lost in some manner, the area needed will be retained in the design file for re-clipping.)
- Place a *SmartLine* around the area to be clip bound.
- It will be necessary to move and/or copy text that your shape cuts through. To do this open the survey and/or alignment file which has the text to be moved and reference the sheet file into it. After referencing the sheet file (which shows the boundary of the clip) *move* or *copy* text as necessary. After completing this procedure for all files, make the sheet file active again with all others as reference files to verify that all text has been moved or copied as necessary.
- Place a *Fence Shape* outlining the *SmartLine* or *Shape* placed on Level 51. *Snap* to each point to ensure an exact copy of the area delineated by the line string.
- Make sure Reference File Locate and Snap options are set on (See Reference File Manipulations Section of Command Menu). Select *Clip Bound* from the menu and identify reference file(s) to be clipped (key-in **ALL**). If only one reference file is to be clipped, then place a *data point* on an element of the individual reference file.
- Turn off level 51 (Set another level active first.)
- **OF=51**
- Plot sheet from the same view that was clip-bound. Turn on display of all clip bound files; turn off display of all other files.
- To see the complete reference file, call up reference file with a different logical name. Turn off display of clip-bound files.

EXAMPLE: Display can be turned on or off by using the logical name only.
OF=SUR1, ALI1, DR

D.3 Stippling and Cross-Hatching

D.3.1 Steps for Patterning

Since the method of drafting plans has shifted from manual methods to CADD, we have tried to eliminate stippling and cross-hatching as much as possible. However, it is still a requirement that proposed pavement areas be defined by stippling, and that existing pavement areas to be demolished should be defined by hatching. Areas of existing pavement which are to be milled (resurfaced) should be defined by hatching with a dot-dashed line style. Some designers prefer to use concrete stippling to delineate proposed concrete sidewalks or entrances, and others use cross hatching to delineate areas for other purposes.

When placing stippling and hatching on the plans, you must use the method described below.

Hatching, Cross-hatching, Stippling for Resurfacing, Concrete, demolition and pavement milling will be placed in a reference file by the roadway plans designer. The filename for this reference file will be Division +UPC#pat.dgn and patterning should be placed on levels listed below.

Erosion control stippling areas will be placed by the hydraulic designer, and should be coordinated with the roadway designer for inclusion into the pattern reference file.

The **levels** that should be used in this reference file when placing hatching and stippling patterns are:

Level	Use	Level	Use	Level	Use
Level 1	for hatching	Level 2	for cross hatching	Level 3	for resurfacing (milling)
Level 4	for stippling	Level 5	for concrete	Level 6	for erosion control

The **steps** are as follows:

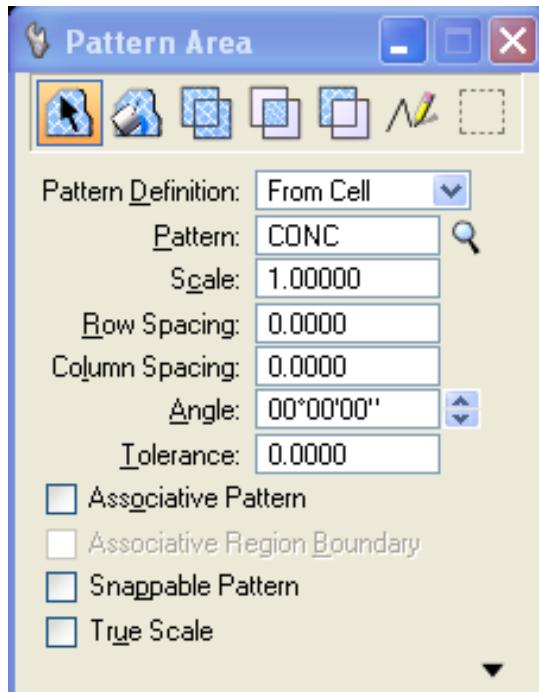

- Set proper level.
- Place shape to be patterned. (It is recommended that shapes are placed thus: level 51 (for hatching), 52 (for cross hatching), 53 (for dot-dash hatching), 54 (for pavement stippling), 55 (for concrete items stippling), and 56 (for EC stone) be used when placing these shapes).
- Set line weight to 1

- Set line style to 0 (LC=0). For resurfacing line style will be 4 (LC=4).
- Once the patterning process is completed, and the pattern reference file is attached to the plan sheets, levels 51-56 should be turned off on the pattern reference file attached to the plan sheets.
- See data below for other attributes. Cell for stippling is in dsymgeo.cel or ***mdsymgeo.cel***

Select **Tools**, then **Main**, then **Patterning** from the MicroStation Menu Bar.

Select **Pattern**, then **Scale**, then enter **Row, Column Spacing and Angle if necessary**.

NOTE: As the demolition of pavement hatching areas and the pavement stippling areas can be used for quantifying plan pay item quantities, it is important that these shapes be accurately depicted.

Steps for Patterning	Steps for Patterning
For Hatching select hatch area. Set spacing Set pattern angle	For Cross-hatching select xhatching Set spacing Set pattern angle
For Resurfacing set line style to LC=4 (dot-dash) Set spacing Set pattern angle	For Stippling select pattern area Select cell - stip Set pattern scale Set row spacing Set column spacing Set pattern angle (Associative patterning must be used.)
For Concrete select pattern area Select cell - conc Set pattern scale Set row spacing Set column spacing Set pattern angle	For Erosion Control select pattern area Select cell rocky Set pattern scale Set pattern angle at 90 \square Set spacing to 0

Associative patterning must be used for stippling.

The STIP, CONC, and ROCKY cells needed for patterning can be found in the dsymgeo.cel, mdsymgeo.cel and drainage Cell Libraries.

D.3.2 Pattern Angle, Scale, Spacing, Row and Column Spacing

D.3.2.1 Imperial Patterning

D.3.2.3 Example of settings for Pavement Stippling

Pavement Stippling for a 25 scale imperial project will be placed using these attributes and pattern area settings:

D.3.2.4 Example of settings for Pavement Hatching

Demolition of Pavement Hatching for a 25 scale imperial project will be placed using these attributes and hatch area settings:

D.4 Standard Levels (*Metric & Imperial Projects*)

D.4.1 Layering Scheme Policy

Survey files will be developed using the appropriate “CADD Level Structure” version.

- Version '95 is to be utilized on surveys initiated after July 1, 1995.
- Version '86 is appropriate for files developed prior to July 1, 1995.

It is not necessary to change the level structure on projects under development. Design files shall be developed using the level and file structure used for the Survey. Unique situations must be reviewed on a case by case basis to determine which level structure is to be utilized.

Example:

- A project being developed in accordance with the latest version of the level structure may use portions of old plans and/or old surveys.
- A new survey may tie to an existing survey developed using the old version level structure.

D.4.2 Levels and Content

D.4.2.1 Standard Levels for Design Projects with Surveys Completed after July 1, 1995

Level	Description
Level 1	Baselines: (25 & 250 Scale) WT = 10, LC = 0 (50 & 500 Scale) WT = 8, LC = 0 Sub-tangents WT = 3, LC = 3

C	1" = 100' 1" = 50' 1" = 25'	16' 8' 4'	7 7 7
D	1" = 100' 1" = 50' 1" = 25'	12' 6' 3'	7 7 7

NOTE: Text Size for other scales may be computed by dividing the desired drawing scale by 100 and multiplying the value for 1" = 100'.

EXAMPLE: For a desired scale of 1" = 10' for type A text

$$\text{Compute: } 10/100 = 0.10$$

$$0.10 \times 16 = 1.6'$$

SCALE	Text Size	Weight
-------	-----------	--------

1" = 10'	1.6'	5
----------	------	---

D.5.2 Metric Text

Text Size	Scale	Text Size	Weight
A	1 : 250 1 : 500	1.0m 2.0m	5 5
B	1 : 250 1 : 500	0.75m 1.5m	5 5
C	1 : 250 1 : 500	1.0m 2.0m	7 7
D	1 : 250 1 : 500	0.75m 1.5m	7 7

D.5.3 Profile Sheet Text Sizes

IMPERIAL

25 SCALE	50 SCALE	100 SCALE
Reference Line Text = 3.0	Reference Line Text = 6.0	Reference Line Text = 12.0
Vert. Align. Annotation = 3.0	Vert. Align. Annotation = 6.0	Vert. Align. Annotation = 12.0

Stations = 1.0	Stations = 2.0	Stations = 4.0
Elevations = 1.0	Elevations = 2.0	Elevations = 4.0

D.5.4 Using the Place Note Command

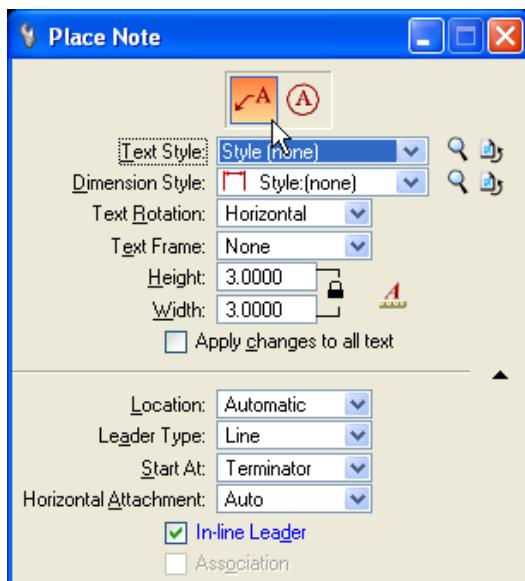

This command is used to place a line(s) of text with a leader line and an arrowhead for labeling items.

After you have selected the **Place Note** command, a dialog box will open that looks like one of the two images shown below.

Set the dialog box to **Place Note** mode.

Text Style should be set to **Style (none)**. **Dimension Style** should be set to **Style:(none)**.

The **Text Rotation** drop down list has three options: **Horizontal**, **Vertical**, or **In Line**. These options set the rotation of the text relative to the leader line. **Text Frame** should be set to **None**. Set appropriate **Height** and **Width** of text in accordance with the project scale.

The **Location** can be set to **Manual** or **Automatic**. These options determine whether the leader line can be placed with multiple segments or one segment.

- If set to **Manual**, the leader line can be placed with multiple segments of a line.
- If set to **Automatic**, the leader line can only be placed with one segment of a leader line.

Leader Type should be set to **Line**.

The **Start At** options control how the note is placed: **Terminator** or **Text**.

- **Terminator** — If selected, the first data point that you enter places the end of the terminator, and the last data point places the text.
- **Text** — If selected, the first data point that you enter places the text, and the last data point places the end of the terminator. You can place multiple leaders on a single piece of text by holding the <Ctrl> key down. Each data point you select (after the first data point), places an additional leader on the text.

The **Horizontal Attachment** sets the leader attachment side: **Auto**, **Left** or **Right**.

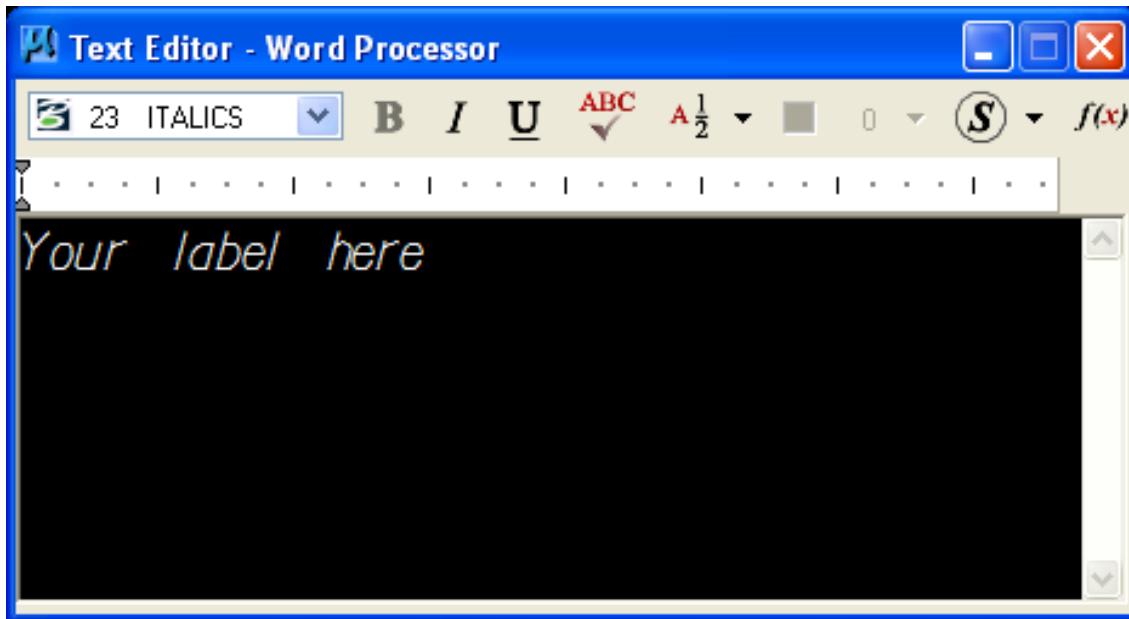

Auto – Multiple lines of text are aligned based on the relationship between the last and the next to last data points. For example, if the next to last data point is to the right of the last data point, the text is right justified.

Left – Multiple lines of text are aligned along their left side.

Right – Multiple lines of text are aligned along their right side.

If the **In-line Leader** is turned on an extra segment of the leader will be placed that aligns with the text. Turning this off and setting **Start At** to **Text** enables a note to be placed without a leader.

Once you have made the appropriate choices, focus into the **Text Editor** window and set the Font to 23 (*Italics*). Now begin typing in your text.

Place a data point to position the arrowhead, and then place a second data point to position the text. Move the mouse left or right to determine where text will be anchored (either left or right side).

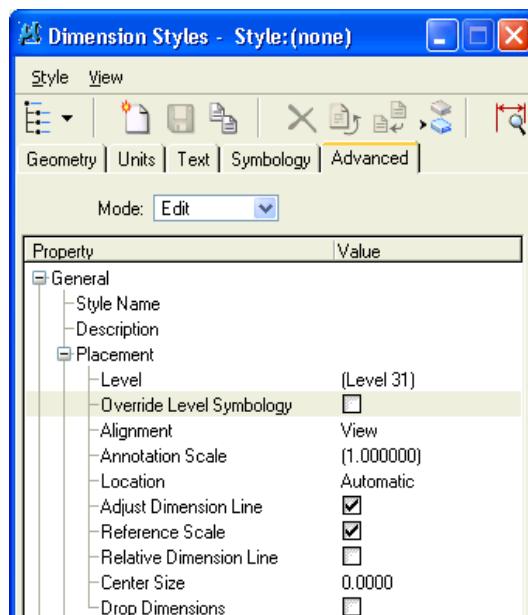

D.5.5 Dimension Styles

Using the above method to label items on your plan sheets does have some restrictions. The text cannot be placed at an active angle other than **0 degrees**. If you try to **rotate** the text, after placement, the leader line and arrowhead will also rotate. Also unless you created this design file after April 15, 2002, you will have to make some dimension changes to get the arrowhead to show up properly. Listed below are the steps you will need to follow to set your design file up correctly.

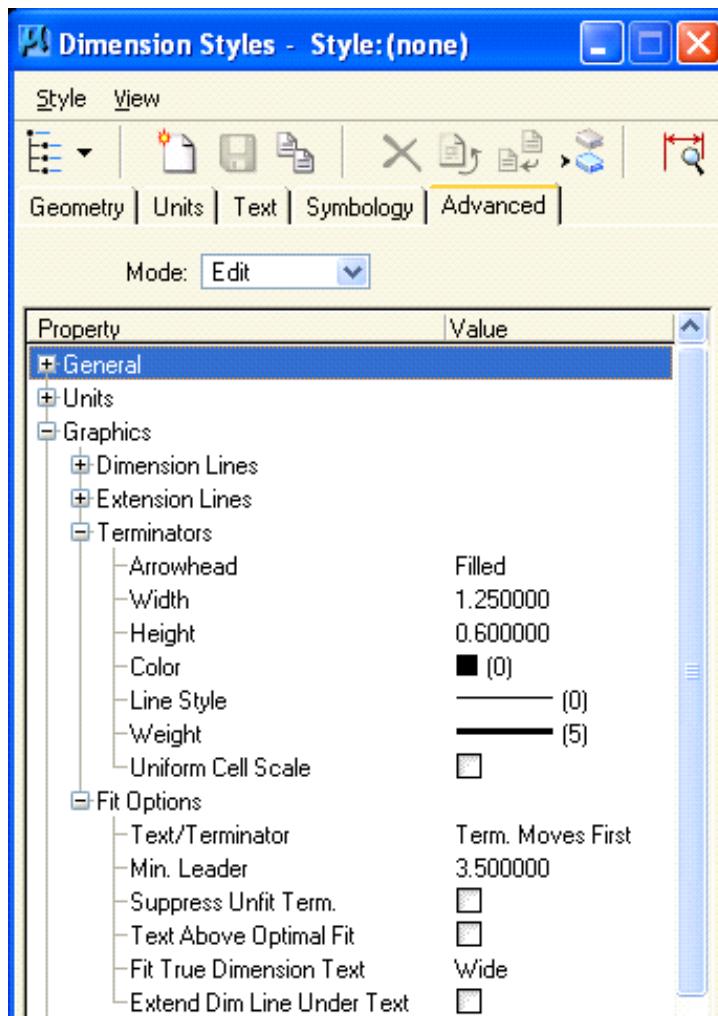

1. In the MicroStation Menu Bar click on **Element**, then **Dimension Styles**.

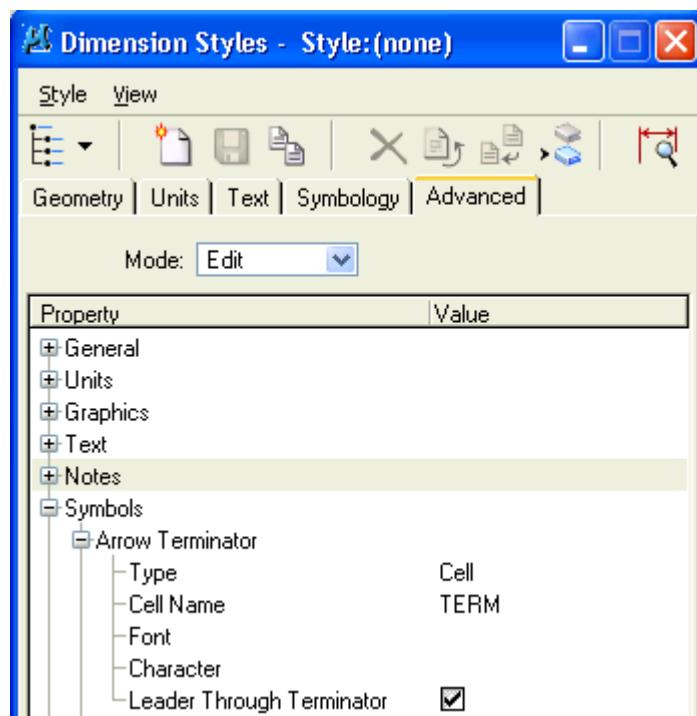

2. In the **Dimension Styles** dialog box click on the **Advanced** tab. Under the Property heading expand the **General** tool then expand the **Placement** tool. Set **Alignment** to **View** and **Location** to **Automatic**. Toggle on **Adjust Dimension Line**.

3. In the **Dimension Styles** dialog box click on the **Advanced** tab. Under the Property heading expand the **Graphics** tool. Under **Graphics** expand the **Terminators** tool and expand the **Fit Options** tool. Under **Terminators** set **Arrowhead** to **Filled**, **Width** to **1.25** for imperial or metric, **Height** to **0.6** for imperial or metric. Under **Fit Options** set **Min. Leader** to **3.5** for imperial or **1** for metric.

4. In the **Dimension Styles** dialog box click on the **Advanced** tab. Under the Property heading expand the **Symbols** tool. Under **Symbols** tool expand the **Arrow Terminator** tool and set **Type** to **Cell** and type in **Term** for **Cell Name**. Either dsym95 or mdsym95 cell library must be attached for proper terminator cell.

After you have completed the steps above, save settings by clicking on **File** then **Save Setting** in the microstation menu.

D.6 Standard Line Weights (Metric & Imperial Projects)

D.6.1 Profile Sheet Line Weights and Thicknesses

Profile Sheet	Weights	Profile Sheet	Line Code
Reference Lines	3	Reference Lines	0
Vertical Alignment	8	Vertical Alignment	0
Tangent Lines	2	Tangent Lines	0
Original Profiles	5	Original Profiles	3

D.6.2 Line Weights and Thicknesses

MicroStation Line Weight	Plotter Line Thickness
WT = 0	0.0075 inches
WT = 1	0.0125 inches
WT = 2	0.0150 inches
WT = 3	0.0175 inches
WT = 4	0.0200 inches
WT = 5	0.0225 inches
WT = 6	0.0275 inches

MicroStation Line Weight	Plotter Line Thickness
WT = 7	0.0325 inches
WT = 8	0.0375 inches
WT = 9	0.0450 inches
WT = 10	0.0500 inches
WT = 11	0.0525 inches
WT = 12	0.0550 inches
WT = 13	0.0575 inches
WT = 14	0.0600 inches
WT = 15	0.0625 inches
WT = 16	0.0650 inches

D.7 Standard Line Styles (Metric & Imperial Projects)

D.7.1 Default Line Styles

Line Style	Line Code	Description
	LC = 0	Solid
	LC = 1	Dotted
	LC = 2	Medium Dash
	LC = 3	Long Dash
	LC = 4	Dot Dash
	LC = 5	Short Dash
	LC = 6	Dash Dot Dot
	LC = 7	Long Dash/Short Dash

D.7.2 Standard Custom Line Styles for Proposed Plans

Custom Line Style	Line Style Name	Line Style Description	Line Style Scale	Line Weight
	bbfc	Brush Barrier with Filter Cloth	job	4
	cg2-s	Curb St'd. CG - 2	Off	4
	cg3-s	Mountable Curb St'd. CG - 3	Off	4
	cg6-s	Curb & Gutter St'd. CG - 6	Off	4
	cg7-s	Mountable Curb & Gutter St'd. CG - 7	Off	4
	ec2-s	Erosion Control Treatment St'd. EC - 2	**	4
	ec3-s	Erosion Control Treatment St'd. EC - 3	**	4
	fcfen	Filter Cloth on Exist. or Prop. Fence	job	4
	fen	Fence(all types)	job	4

Custom Line Style	Line Style Name	Line Style Description	Line Style Scale	Line Weight
	gfbd	Graded Flat Bottom Ditch	job	4
	gvd	Graded "V" Ditch	job	4
	mb3-s	Median Barrier St'd. MB - 3	job	4
	mb7d-s	Median Barrier St'd. MB - 7D	Off	4
	mb7f-s	Median Barrier St'd. MB - 7F	Off	4
	pc*	Prop. Pipe Culverts(42" and Smaller)	Off	0
	pc*	Prop. Pipe Culverts(48" and Larger)	Off	10
	pcud4	Pipe for St'd. UD - 4	Off	0
	pcud6	Pipe for St'd. UD - 6	Off	0
	pgr	Prop. Guardrail	job	4

Custom Line Style	Line Style Name	Line Style Description	Line Style Scale	Line Weight
	ptrac	Prop. Rail Road Track	Off	4
	pvfbd	Paved "V" or Flat Bottom Ditch	Off	4
	tfb	Temp. Filter Barrier	job	4
	tsf	Temp. Silt Fence	job	4
	turctn	Turbidity Curtain	job	4
	vepcop	Prop. Underground Power Cable	job	4

Metric line code names are the same, except they end in "-m" .

* Denotes Pipe Culvert size (i.e. PC18 = 18"pipe).

** = Scale factor controls width of treatment material.

Line Style Scale has three settings as follows:

job = scale factor is on and value field should be set to **.25** for 25/250 scale
or **.50** for 50/500 scale.

Off = Turn toggle switch off.

4' width = scale factor off

6' width = scale factor on, value field = 1.5

8' width = scale factor on, value field = 2

D.8 Standard Cell Libraries

This section contains graphic examples of all cells found in dsymgeo, dsym, mdsymgeo, and mdsym cell libraries which are symbols created for use in drafting the design of a project. Other symbols will be placed in this library as they are created and approved by the CADD Manager.

NOTE: These cells are **not to be changed** without the permission of the Location and Design CADD Manager.

NOTE: *For the most up to date cells, please attach the Cell Library in Microstation or use the Design and Computation Manger in GEOPAK.*

NOTE: The * is used as a wildcard for items such as pipes and drop inlets to avoid duplication of drawings in this manual. Wherever you see an asterisk (*), you should replace it with the appropriate pipe size or drop inlet size (name).

D.8.1 Design Symbols Cell Libraries

D.9 Creating Cross Section Plot File for Electronic Submission

The following procedure will not work properly if you have dropped status of cross section sheet cells.

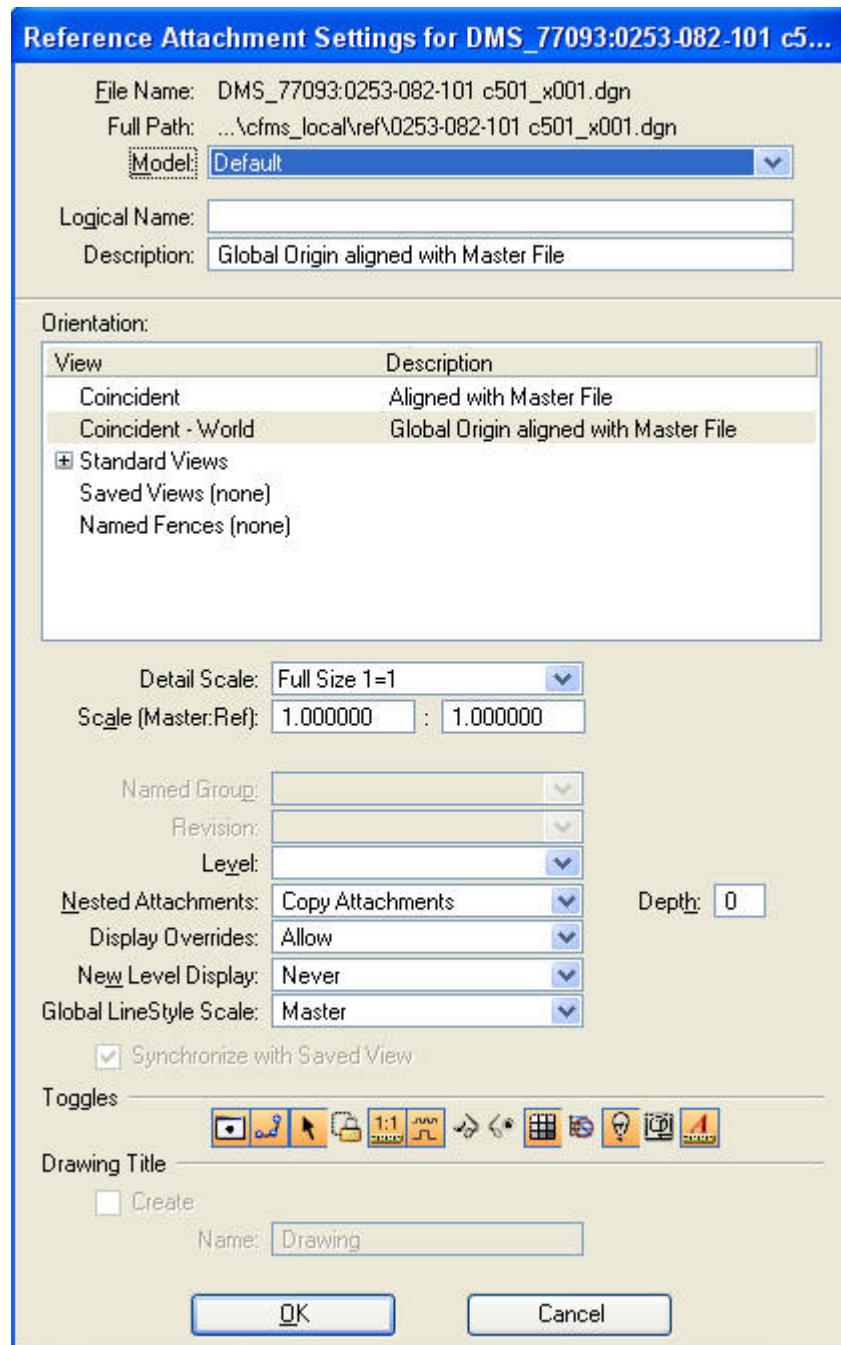

Create a new MicroStation file using the appropriate seed file (geopakxsht.dgn or mgeopakxsht.dgn) and name the file the same as the **project number _x.dgn** (Example: **0172-114-v02 c501_x.dgn**).

D.9.1 GEOPAK Cross Sections

Reference up mainline cross section sheet file in Falcon.

Then use **Copy Attachments** with a depth set to 1

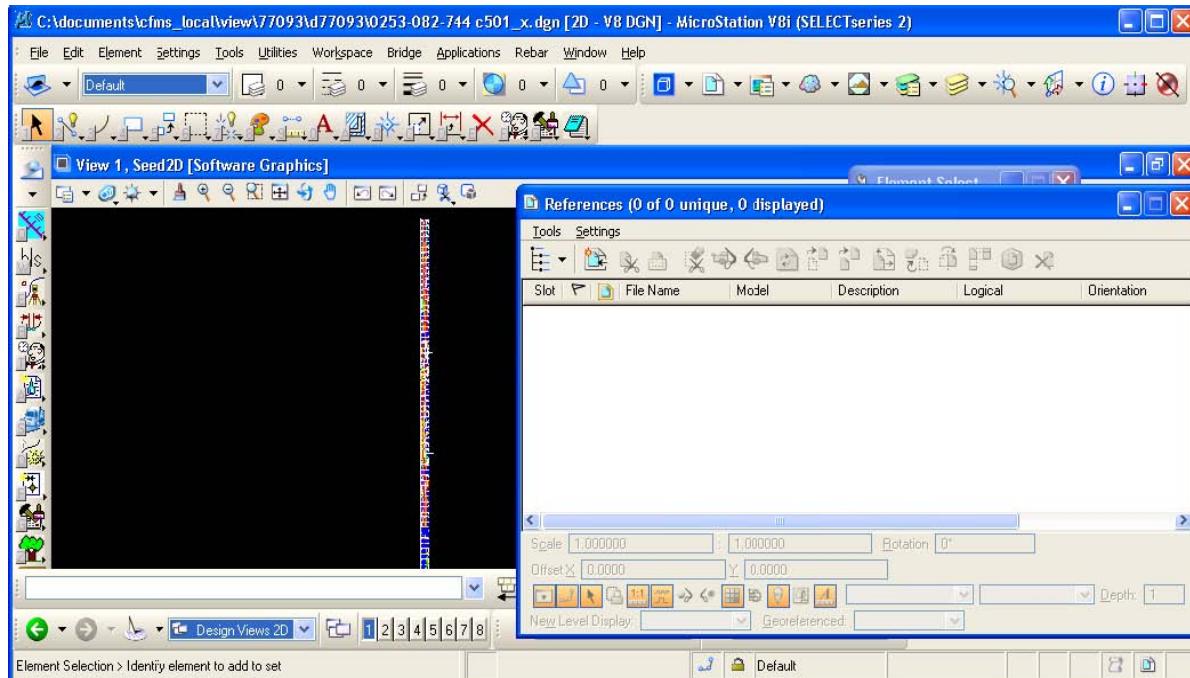

Fence and **Copy** cross sections from reference file in MicroStation. (Make sure you offset the copied cross sections from the original stack. This is necessary because all cross section reference files will attach at the same location which would make it difficult to distinguish between the copied cross section and the new attached cross sections).

Next detach all reference files.

Make sure you reference the files in order starting with file that contains cross section sheet 1.

Reference up all other pertinent cross section files one by one and repeat the previous steps. Copy the cross sections so they are just above the previous cross section sheets. They should be in the same order they would come in the plan assembly (bottom to top)

The Cadd section will plot the cross sections to PDF upon a request from the Designers. Make sure the sheets are named and numbered properly or they will be returned to you to redo.

Designers should send an email with a brief description of the project including the following details when the cross sections need to be plotted.

File Name

UPC #

File location in falcon (data base and environment)

Location PDF files shall be placed (current drawings or plan file room)

If you have any questions please contact the CADD Support Helpdesk via email
CADDSSupport@Vdot.Virginia.gov.or call toll free 888.683.0345 or local 804.786.1280.

D.10 VDOT Standard Data

VDOT STANDARD DATA: The following VDOT standard data is available in electronic format from VDOT.

D.10.1 MicroStation Seed Files

For all Seed Files names and Descriptions see [Chapter 3.1.3.1](#).

D.10.2 MicroStation Cell Libraries

Cell Library Name	Description
annotate.cel	Contains standard symbols for annotating plans.
bwMOT.cel	Contains Maintenance of Traffic signs for MOT plans. (Black and White)
drainage.cel	Contains standard drainage items for hydraulics projects.
dsymgeo.cel	Contains standard items for imperial project (Drop Inlets, Pipe Culverts, Standard Symbology, etc.)
geopakgint.cel	Contains standard Geotechnical symbols.
landscape2d.cel	Contains standard Landscaping items (Trees, Shrubs, Patterns etc.)
landscape3d.cel	Contain 3D cell of standard Landscaping items (Trees, Shrubs etc.)
Igennote.cel	Contains all the General Notes used for plans
materials	Contains Material items (Details, Notes, Typicals, Symbols, etc.)

Cell Library Name	Description
mdrainage.cel	Contains standard drainage items for hydraulics metric projects.
mdsymgeo.cel	Contains standard items for metric project.
mlightin.cel	Contains standard lighting items for metric projects.
MOT.cel	Contains Maintenance of Traffic signs for MOT plans.(Color)
MOTE.cel	Contains cells to depict existing Maintenance of Traffic signs for MOT plans.
msheet95.cel	Contains standard plan, profile, cross section sheets, scale bars and north arrow for metric plans.
msignal.cel	Contains standard signal delineations for metric Traffic Engineering plans.
mstdtyp95.cel	Contains standard typical section items for metric plans.
Msurv.cel	Contains standard items used in developing survey topography for metric projects.
noise.cel	Contains Symbols for Noise Abatement plans.
Panels-MUTCD.cel	Contains standard signs and plaques listed the Manual on Uniform Traffic Control Device (MUTCD).
Panels-MUTCD_WAPM.cel	Contains standard signs and plaques listed in MUTD and the Virginia Work Area Protection Manual (WAPM).

Cell Library Name	Description
Panels-Supplement.cel	Contains supplement signs and plaques in accordance with MUTD.
Panels-Supplement-WAPM.cel	Contains supplement signs and plaques in accordance MUTD and WAPM.
PHsheet.cel	Contains sheet cells for use in development of Public Hearing displays.
phtyp.cel	Contains perspective typical sections for use in development of Public Hearing information.
rwV14.cel*	Contains as-built items on the named As-built level structure.
section.cel	Contains two Guardrail sections L and R.
sheet2000.cel	Contains standard plan, profile, cross section sheets, scale bars and north arrow for imperial plan development that also allows for true half size printing (11x17).
sign.cel	Contains standard signage delineations for Traffic Engineering plans.
stdtyp95.cel	Contains standard typical section items for imperial plans.
survey.cel	Contains standard items used in developing survey topography for imperial projects.
surveyphoto.cel	Contains Photogrammetry items on the Photogrammetry level.

* Rev 2/18

Cell Library Name	Description
SurveyV14.cel*	Contains updated survey items on the Survey levels.
TEDBorder.cel	Contains items for Traffic Engineering plan sheets such as Border Information, Quantity Summary sheet, title sheet, etc.
TEDPaveLeg.cel	Contains text and symbols to be placed in the legend of Traffic Engineering pavement markings plan.
TEDPaveMark.cel	Contains items for Traffic Engineering plans such as pavement marking arrows, pavement marking call-outs, pavement marking letters, etc.
TEDPlanLabel.cel	Contains text and symbols to be used in labeling Traffic Engineering plans.
TEDSheet1.cel	Contains items to be used for creating Plan Index, General Notes and Legends for the first sheet of the Traffic Engineering plan set.
TEDSignal-Lighting.cel	Contains items for Traffic Engineering Signal and Lighting plans such as signal heads, controller cabinets, junction boxes, signal poles, luminaire arms, lighting pole foundations, labels, call-outs, etc.
TEDSigning.cel	Contains items for Traffic Engineering Signing plans such as sign structure symbols, signing call-outs, etc.
TEDSumQuan.cel	Contains items for creating Summary of Quantities Sheets for Traffic Engineering

* Rev 2/18

Cell Library Name	Description
	plans.
VDOTplats.cel	Contains items for creating VDOT Plats such as Borders, General Notes, Scale Bar, etc.

D.10.3 MicroStation Pen Tables

Used for plotting MicroStation files.

Pen Table Name	Used For
bfull.tbl	Bridge Plots
bhalf.tbl	Half Size Bridge Plots
half_v95.tbl	Half Size Roadway Design Plots
half_v95_row.tbl	Half Size Right of Way Plots
half_v95traffic.tbl	Half Size Traffic Engineering Plots
ld_v95.tbl	Roadway Design Plots
ld_v95_row.tbl	Right of Way Plots
ld_v95traffic.tbl	Traffic Engineering Plots
ld_xsc.tbl	Cross Sections Plots
ld_xsc_10_scale.tbl	Change the line styles from dashed to solid and reduce the lines weights so the design and exiting ground shows up better on Cross Sections Plots

ld_xsc_5_scale.tbl	Change the line styles from dashed to solid and reduce the lines weights so the design and exiting ground shows up better on Cross Sections Plots
ld_v95_utilities_color.tbl*	Utility (UT) sheet plots
rw_sheet.tbl	Right of Way (RW) sheet plots

* Rev 2/18

D.10.4 MicroStation Font Libraries

Font Name	Description
desstyl.rsc	Contains VDOT developed line styles for imperial files.
font.rsc	Contains standard fonts for metric and imperial project development.
mdesstyl.rsc	Contains VDOT developed line styles for metric files.
msurv.rsc	Contains VDOT developed line styles for metric survey files.
pavement.rsc	Contains VDOT developed line styles for pavement markings.
photogrammetry.rsc*	Contains VDOT developed line styles for photogrammetry files.
survey.rsc	Contains VDOT developed line styles for imperial survey files.
surveyV14.rsc	Contains VDOT developed line styles for survey files.
traffic.rsc	Contains VDOT developed line styles for imperial traffic files.

D.10.5 Workspace Files

.ucf	User configuration file for workspace variables for MicroStation V8i.
------	---

D.10.6 GEOPAK Configuration Files

Criteria Files	Cross section criteria are used to draw cross section features outside of the mosaic of superelevation shapes typically representing pavement. Operationally, the software constructs the cross section features derived from the mosaic of shapes first. Then, the
-----------------------	---

* Rev 2/18

	software constructs the remaining portions of the cross section through the application of criteria emanating out from the outer edges of the mosaic of shapes.
D&C Manager	A tool that allows the user to pick from standardized items and special applications for drafting.
Labels	Labeling tools allow a user to place smart labels in a MicroStation drawing. These labels have the ability to calculate XYZ coordinates, station, offset, direction, length, radius, degree of curvature, etc. of the associated element. It also allows you to pick symbology from the D&C Manager.
Macros	Special applications for creating tangent lines, curve widening, labeling R/W pluses, creating Superelevation Diagrams, and numbering cross section sheets, etc.
Sheets	Contains motif files and layout standards for plan/profile sheet clipping.
Standards	Contains standard tables of design speeds for curves
Superelevation	. Contains standard superelevation tables

D.10.7 VDOT Insertable Sheets - (as requested)

Insertable sheets can be copied into a MicroStation file by means of referencing the desired drawing. VDOT personnel can locate the insertable sheets through the **Falcon Document Manager** under the eng-ser folder. For the entire list of insertable sheets, set your Falcon/DMS database to Central Office and Central Office Environment. Then scroll to the eng-ser Folder and select **insert** for imperial sheets or **minsert** for metric sheets. Some of the insertable sheets have been moved to the MicroStation Cell Library. See [Appendix A](#) for a list of the insertable sheets that now reside in **sheet2000.cel**. The Consultants can locate the insertable sheets under the download folder within their ftp server site provided by VDOT.

The appropriate Insertable Sheet (**Now a Sheet Cell**) does not have to be included in applicable plan assemblies to explain the level structure anymore.

Although the following Insertable Sheets are now available in the **sheet2000** Cell Library as a cell, **the CADD Level Structure sheets are no longer required as part of the plan set.**

- ['95 CADD LEVEL STRUCTURE SHEET](#)
- ['86 CADD LEVEL STRUCTURE SHEET](#)

This sheet is not to be assigned a one series sheet number and does not have to follow the Alignment Data Sheet in the Plan assembly.

D.11 Generating and Submitting PDF Files *

D.11.1 Database Fields

When you are ready to create PDF files for Current Drawings, Pre Advertisement Conference, Final Submission, Pre-Award Revision or Construction Revision you must first make sure the following fields are filled in correctly in Falcon DocMan to insure that the PDF files are submitted properly.

D.11.1.1 General Information

The “**Description**” and “**Document #**” must be filled in for each plan sheet. In the “**Document #**” field, place the sheet number. If the sheet number is 1 thru 9 place a zero (0) in front of the sheet number. (For example if the sheet number is 1c the Document # should be 01c.) If the file is not a plan sheet, then the field should be blank

File Format Keywords]

General Info. [**Keywords** | **Title Block**]

UPC	57546
Division	d57546
SubDirectory	
Description	Title Sheet
Sheet #	01
Status	index
Availability	On Server
Last Modify Date	07/06/2004
Last Checked Out By	tracy.wood
Created On	03/14/2003
Created By	wood_tm
File Format	igds

D.11.1.2 Keywords

The project information must be filled in with your project number as shown below. The route number should be 4 digits, such as 0123 and the section number 3 digits. County/City is a pick list.

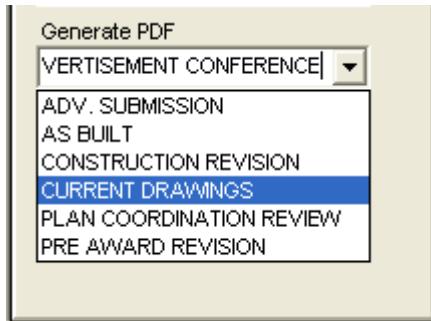

This screenshot shows the 'File Format Keywords' dialog box with the 'Keywords' tab selected. The 'County/City' field contains '099' with a dropdown arrow indicating it is a pick list. Other fields include 'Archive' (empty), 'Route' (0064), 'Section' (107), 'Struct/Bridge Plan #' (empty), 'C # or M #, etc.' (C501), and 'Job #' (empty).

D.11.1.3 Format Keyword

The Engineer, Designer, District and County should be filled in for informational purposes. The File Format Keyword field for “Generate PDF” is a required database field. The user should use the down arrow to select one of the choices.

This screenshot shows the 'File Format Keywords' dialog box with the 'Keywords' tab selected. The 'Generate PDF' field contains 'VERTISEMENT CONFERENCE' with a dropdown arrow indicating it is a pick list. Other fields include 'Engineer' (E. J. HENSHAW), 'Designer' (T. M. WOOD), 'District' (HAMPTON ROADS), 'County' (YORK), 'Unit/Measure' (empty), and 'Scale Factor' (empty).

The stages to Generate PDFs are as follows:

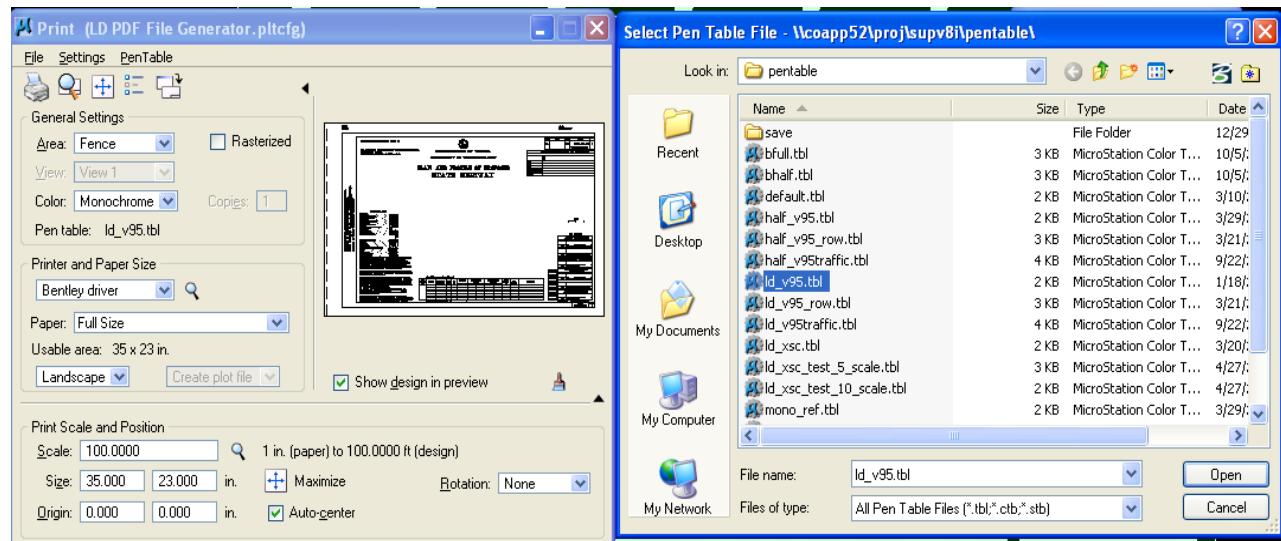

Remember to select “SAVE”. The choices above will indicate what stage the PDF files are being submitted for. The CADD support staff will make the PDF files available on the Falcon Web Suite under Current Drawings if “current drawings” is selected.

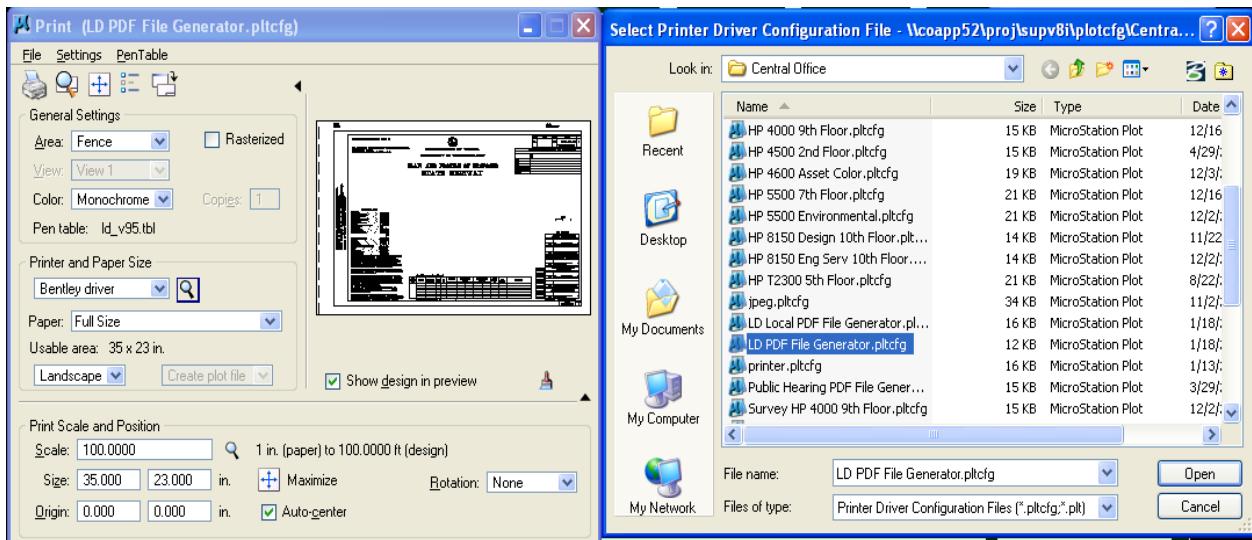

If Plan Coordination Revision or any stage after is selected, the PDF files go directly into the Falcon Web Suite under Plan File Room.

D.11.2 Generate PDF File

Once all the required database fields are set, the dgn files are ready for the user to use MicroStation V8i Plotting software to generate the PDF files. To create a PDF file open the dgn file in MicroStation. Fence the file the same as if you were going to plot the sheet. Then go to **File - Print**. Print box will open. At the top click on **Pen Table** then click **Attach**. The Pen Table box will open. Select the appropriate pen table and click **Open**.

Now click on the Bentley Driver search tool. Pick the **LD PDF File Generator.pltcfg** file and then click **Open**. The size will be set to 35 X 23 inches. Do not change the size even if it's a metric project. Click on **Print** then **Save**. This will create the PDF file.

To view the PDF file go to \\501coidms01\location&design\$\Z2nd sub tifs\Central Office

***Note: As of July 1, 2009 the required format will be PDF files. All information referring to PDF Files will be revised to show the creation of PDF files. This change is to coincide with the new policy concerning the Signing and Sealing of plans. Digital Signatures will now be required to complete the Electronic Submission process.**
