

**Appendix 7D-6 Permissible Velocities  
for Erodible Linings**

Permissible velocities for channels with erodible linings, based on uniform flow in continuously wet, aged channels<sup>1</sup>:

| Soil type or lining (earth;<br>no vegetation) | Maximum permissible<br>velocities for |                                 |                                         |
|-----------------------------------------------|---------------------------------------|---------------------------------|-----------------------------------------|
|                                               | Clear<br>water                        | Water<br>carrying<br>fine silts | Water<br>carrying<br>sand and<br>gravel |
|                                               | <i>F.p.s.</i>                         | <i>F.p.s.</i>                   | <i>F.p.s.</i>                           |
| Fine sand (noncolloidal)                      | 1.5                                   | 2.5                             | 1.5                                     |
| Sandy loam (noncolloidal)                     | 1.7                                   | 2.5                             | 2.0                                     |
| Silt loam (noncolloidal)                      | 2.0                                   | 3.0                             | 2.0                                     |
| Ordinary firm loam                            | 2.5                                   | 3.5                             | 2.2                                     |
| Volcanic ash                                  | 2.5                                   | 3.5                             | 2.7                                     |
| Fine gravel                                   | 2.5                                   | 5.0                             | 3.7                                     |
| Stiff clay (very colloidal)                   | 3.7                                   | 5.0                             | 3.0                                     |
| Graded, loam to cobbles (noncolloidal)        | 3.7                                   | 5.0                             | 5.0                                     |
| Graded, silt to cobbles (colloidal)           | 4.0                                   | 5.5                             | 5.0                                     |
| Alluvial silts (noncolloidal)                 | 2.0                                   | 3.5                             | 2.0                                     |
| Alluvial silts (colloidal)                    | 3.7                                   | 5.0                             | 3.0                                     |
| Coarse gravel (noncolloidal)                  | 4.0                                   | 6.0                             | 6.5                                     |
| Cobbles and shingles                          | 5.0                                   | 5.5                             | 6.5                                     |
| Shales and hard pans                          | 6.0                                   | 6.0                             | 5.0                                     |
