

The diagram above illustrates intersection sight distance for a two lane major road where $SDL=SDR$.

For more information on Sight Distances see Appendix “F”.

Trees, landscaping, and other encroachments onto the right of way can obscure pedestrians or other vehicles preparing to enter the roadway from adjacent property or side streets. To protect the safety of pedestrians, bicyclist, and motorists alike, it is appropriate for vehicle operators to have an unobstructed view along the full length required by the sight distance triangle.

Along all planting strips, the area between 2 and 7 feet above ground shall be maintained free of any obstructions that may block the driver's view to preserve motorists and pedestrian sight lines to avoid potential conflicts. See diagram below.
