

Survey parties have been, for some time, locating all existing property corners (monuments, stones, iron pins, trees, fence corners, etc.) referenced to the survey baseline by station and right angle offset or radial offset distance with both station and distance being accurately measured to the nearest one-hundredth of a foot. Property line bearings are furnished, calculated from the bearing of the survey and the direction of the bearing referred to this base line.

The monuments along right of way lines, to meet inter-visibility requirements, shall be estimated by studying the grades or left up to the party setting the monuments to be placed at least every 2500' (750 meters). It is preferable to make an estimate from the plans to reduce the possible overrun on right of way monuments in the summaries.
