

### 4.2 SIGN PANEL SPECIAL DETAIL SHEETS

Prepare Sign Panel Special Details, as shown in [Appendix IIA-4](#) and [IIA-5](#).

- All guide signs shall be designed and fabricated utilizing the “Clearview Highway Font” as is indicated in Traffic Engineering Memorandum TE-337. (See Appendix 11B-51).
- All special and Non-Standard signs indicated in the Sign Schedule require a Sign Figure Detail. After determining the appropriate letter size, spacing and margin from the MUTCD, Standard Highway Signs Manual or the Virginia Supplement to the MUTCD, the values are inserted into the GUIDSIGN software program to generate the detail, as shown in Figure 4-2. The values can be modified by the designer to accommodate sign sizing.
- The overall sign panel size dimensions from GUIDSIGN need to provide a dimension divisible by six, to be in accordance with VDOT Standards.
- If Logo Signs are included in the plans, it will be necessary to include insertable sheets for Logo Signing with guidance and input from the State Signing Programs Section.

**EXAMPLE OF SIGN PANEL SPECIAL DETAILS  
(See Appendix IIA-4)**
