

RIGHT OF WAY

All existing right of way acquired in fee will be shown on plans as established by the survey information or other data. The plans should not designate prescriptive or statutory right of way as existing right of way. It is not necessary to show entire property boundaries on plans. Property lines and lot lines are to be plotted from the information provided by the Electronic Data Collector, property data, and in conjunction with separately drawn plats as furnished with other survey information. All available information is to be shown on the plans in this respect (bearings, distances, lot numbers, all data used for plotting, etc.). This information is to be individually labeled, whether "survey" or "plat" information. [Property line symbols](#) are to be shown on all property lines. [Property owners' names](#) are to be shown in conspicuous locations within each applicable property, along with [deed book numbers](#), [page numbers](#), and [total acreages](#). Distances, bearings and curve information (metes and bounds) are to be shown for the entire periphery of take on all properties owned by U.S. and state agencies; National Forests; Railroads and Power Companies. For more information see Chapter 6 in the [Survey Manual](#).

ROAD AND STREET NAMES

Road and street names are to be shown on plans and in correspondence in addition to route numbers. The name is to be shown below the route number block in the upper right hand corner of all plan sheets and, if feasible, the name is to appear within the roadway limits.

Otherwise, the name is to be shown on the plan sheet in close proximity to the road or street. This procedure is of particular value to field personnel and area residents who can more easily identify existing thoroughfares by road or street names rather than by route numbers. Individual lot numbers, where assigned, are to be shown in cities, towns and built-up areas. If lot numbers have not been assigned, the block numbers should be prominently shown. Lot numbers should be shown within the limits of the building, if possible. If not, they should be shown as close to the buildings as practicable.

SITE PLANS

Site plans for developments to be constructed during the plan development process will not be shown on roadway plans until the development construction is complete and the site has been surveyed in the field.

PLOTTING OF PROFILE SHEETS

[Profile sheets](#) are to be plotted at this stage using the base sheet available from the Automated Engineering Section and in accordance with the following:

* Rev. 7/15
