

## **SECTION 2G-6-QUALITY CONTROL CHECKING**

### **QUALITY CONTROL CHECKING PROCEDURE**

This review of the completed construction plans is conducted when all items have been checked in the Advertisement column of the checklist (approximately 10 days prior to the Pre-Advertisement Conference\*). This review will be conducted by the Design Section Manager. There may be situations in which the Design Section Manager's peers will conduct this review.

It is the Project Manager's responsibility to coordinate with other disciplines involved (Structure and Bridge, Traffic Engineering, etc.) to ensure complete plan assemblies for checking. It will be the other disciplines' responsibility to conduct their own internal plan reviews before submitting plans to the Project Manager for review.

[See Chapter 1E for Quality Control Checking Procedures.](#)
